

Cosmetics services

Dr. Elena Volodina

Consultant

Full support for cosmetic products

Diapharm provides companies that produce beauty and skincare products accompanied by medical effects with support when it comes to portfolio analysis, ideas, development, evaluation and regulatory services for their cosmetics. Our main focus is on borderline cosmetics, which are also often referred to as cosmeceuticals. We take care of all tasks – aside from manufacturing and marketing – that are necessary to successfully get cosmetics to market.

Our services include:

- Portfolio analysis and strategic advice
- Evaluation and development of formulations
- Clarification of borderline issues, expert reports
- Creation of product information files (PIDs/PIFs)
- Claims, labelling and testing of packaging
- Notification processes
- Cosmetovigilance
- Analytics, dermatological tests, safety reports
- Cosmetic GMP audits in accordance with ISO 22716
- Responding to consumer inquiries and regulatory objections
- In-licensing and out-licensing scouting

As a service provider with extensive market experience, we can oversee the entire product management process, from the first idea to market launch, depending on the client's request. We perform feasibility analyses and help clients decide on the right path to take for the product.

We seamlessly take over the regulatory work required during the course of development. If necessary, we can also coordinate and audit contract manufacturers and give the go-ahead for production.

This allows you to focus all your energy on what really matters: the marketing and commercial success of your product.
